ATR-72-200/500

ATR72-200/500 AIRCRAFT MODEL

By Jon Murchison, August 2003.

INSTALLATION:
Simply unzip the folder and double click the self installing file. Please make sure you check the installation directory carefully when prompted.

TERMS:
Usual stuff, don't rip me and others off by selling this file, don't include it on any compilation CD (even if you think you are doing people with slow connections a service, your still stealing), don't include it on any website that charges for downloads.

REPAINTS:
Go for it, but you must include this README file with the repaint and acknowledge me as the original author. Don't email me asking for a Paintkit because there isn't one, but feel free to ask me about anything else. Email me at jonmurchison@hotmail.com

MODELS:
Both the 200 and 500 variants of the ATR are featured in this package. Once installed, look under ARNZ in your manufacturers list to fly them.

PANEL:
The file comes with a basic panel; it sucks so I suggest you replace it with something more functional.

TEXTURES:
The 500 variant has been released in Air New Zealand link livery, and the 200 version in Origin Pacific. Both airlines operate the ATR on New Zealand domestic flights to regional centres.

PATCHES AND FUTURE UPDATES:
For patches and updated models visit: http://arnz.myhost.co.nz . I will shortly be releasing a 200-F.
